Summary

Full Stack Engineer graduate with strong foundations in **Data Structures & Algorithms**, **Object-Oriented Programming**, and scalable web architecture. Experienced in building secure **RESTful APIs**, high-performance backend systems, and production-ready full-stack applications. Passionate about writing clean, testable code and developing robust **production web applications**.

Skills

Programming: C++, Python, JavaScript, SQL

Frontend: React.js, HTML5, CSS3, Tailwind CSS, TanStack Query

Backend: Node.js, Express.js, RESTful APIs

Databases: MySQL, MongoDB, Firebase Firestore, Redis

DevOps & Cloud: Docker, AWS (Basic Deployment Concepts), CI/CD (GitHub Actions), Git

Core Concepts: OOP, Data Structures, Algorithms, API Design, Data Modeling, Debugging, Web Security

Projects

CodeCrackr AI – StackOverflow-Inspired DSA Platform

Live

React, Node.js, Express, MongoDB, Redis, Docker

- Built a scalable DSA platform with modular backend services and secure APIs.
- Designed and implemented **RESTful APIs** with JWT authentication and role-based access control.
- Applied **database indexing** and Redis cache-aside strategy, reducing read load by approximately 30%.
- Applied lazy loading and code splitting to optimize bundle size and performance.
- Containerized the application using **Docker** and deployed on cloud environment for production-ready setup.

ConnectX – Real-Time Chat Application

Live

React, Firebase, Cloudinary

- Built a real-time chat app using Firebase Firestore and Realtime Database.
- Implemented authentication using **Firebase Authentication** (Email/Password and Google OAuth).
- Implemented real-time messaging and presence tracking using Realtime Database.
- Integrated **Cloudinary** for secure media storage and file sharing in chat conversations.

TaskFlow – Backend Workflow Management System (CLI)

GitHub

Node.js, Express, MySQL

- Developed backend REST APIs for project, task and pull request management using raw SQL.
- Implemented **Role-Based Access Control (RBAC)** with strict ownership validation to prevent unauthorized task assignments.
- Designed a structured state workflow for tasks and pull request lifecycle with strictly enforced transitions.
- Applied relational schema design and SQL joins to ensure data consistency and workflow integrity.

Education

Bachelor of Engineering in Artificial Intelligence & Data Science

D. Y. Patil College of Engineering, Pune

Graduation: 2026
